

PAGE CONTROL 2.0

The plug-in lets you create different page sizes inside one InDesign document. One page could be Letter and another page could be A3, and next one could be the size of an envelope. Inserts, foldout and even spines can now be part of the same document file. With version 2.0 users can arrange pages in spreads vertically.

Page size can be assigned to a single page or spread or to a master page and all associated pages. There is no limit to how many different page sizes there are in the document.

New Features:

- » Rotating pages for more convenient combinations of portrait and landscape pages
- » Page content can be resized or rotated together with page, non-resized objects can be anchored to sides centre or corners
- » Pages in spreads no longer have to be next each other - they can be on top of one another simplifying creation of publications using flip up format (such as calendars)
- » Page size info in slug area and per document generated size report
- » Full INX format support
- » Previous version's features re-created for even greater reliability and efficiency

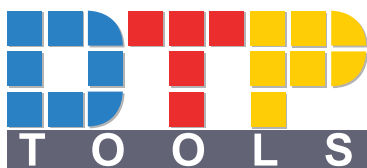

Other Key Features

- » Resize one - or every - page in a document individually
- » Create landscape and portrait pages in the same document
- » Resize master pages and automatically resize pages according to the master page
- » Customize pasteboard sizes
- » Print or export to PDF, retaining page sizes
- » Documents with custom page sizes and spread orientations can still be opened in any InDesign regardless of the plug-ins installed. Free reader plug-in is available to ensure safe editing.
